Dr. Ron Falk

Fibrillary GN

“Fibrillary GN: How did I get it?”

Patient:       How did I get this disease?

Dr Falk:       This is one of those diseases that we truly have no idea what causes it. We don't know what causes this protein to deposit in the funny way that it's deposited. How it started, what made the protein, what made the protein deposit abnormally, is really way outside of our understanding at this point in time.

That's not a very satisfactory answer, but it is the truth.
