Dr. Ron Falk

Fibrillary GN

“Fibrillary GN: Has new research been published?”

Patient: Can you tell me about any research that has been recently published on this disease?

Dr Falk: Unfortunately, very little has come out recently on Fibrillary GN. In the past, we and others have published data about how patients with this disease do over the long term, and to the best of our knowledge how Fibrillary GN looks under the microscope.

Unfortunately, there is no research at the present time to help us understand why these deposits are forming in the first place.
